

Package ‘ACNE’

August 19, 2025

Version 0.9.2

Depends R (>= 3.0.0), aroma.affymetrix (>= 2.14.0)

Imports MASS, R.methodsS3 (>= 1.7.0), R.oo (>= 1.23.0), R.utils (>= 2.1.0), matrixStats (>= 0.50.0), R.filesets (>= 2.9.0),
aroma.core (>= 2.14.0)

Suggests DNACopy

Title Affymetrix SNP Probe-Summarization using Non-Negative Matrix
Factorization

Description A summarization method to estimate allele-
specific copy number signals for Affymetrix SNP microarrays using non-
negative matrix factorization (NMF).

ACNE-package

*Package ACNE***Description**

A summarization method to estimate allele-specific copy number signals for Affymetrix SNP microarrays using non-negative matrix factorization (NMF).

Installation and updates

This package requires the **aroma.affymetrix** package. To install this package, do: `install.packages("ACNE")`

To get started

1. For a one-command pipeline, see the [doACNE\(\)](#) method.
2. For other usages, see the [NmfP1m](#) class.

License

LGPL (>= 2.1)

doACNE

*(ACNE)***Description**

(ACNE) based on [1]. The algorithm is processed in bounded memory, meaning virtually any number of arrays can be analyzed on also very limited computer systems.

Usage

```
## S3 method for class 'AffymetrixCelSet'
doACNE(csR, fln=FALSE, drop=TRUE, verbose=FALSE, ...)
## Default S3 method:
doACNE(dataSet, ..., verbose=FALSE)
```

Arguments

csR, dataSet	An AffymetrixCelSet (or the name of an AffymetrixCelSet).
f1n	If TRUE , CRMAv2-style PCR fragment-length normalization is performed, otherwise not.
drop	If TRUE , the RMA summaries are returned, otherwise a named list of all intermediate and final results.
verbose	See Verbose .
...	Additional arguments used to set up AffymetrixCelSet (when argument dataSet is specified).

Value

Returns a named [list](#), iff drop == FALSE, otherwise a named [list](#) of [AromaUnitTotalCnBinarySet](#) and [AromaUnitFracBCnBinarySet](#).

NmfPlm

The NmfPlm class

Description

Package: ACNE

Class NmfPlm

[Object](#)

```

~~|
~~+--ParametersInterface
~~~~~|
~~~~~+--Model
~~~~~|
~~~~~+--UnitModel
~~~~~|
~~~~~+--MultiArrayUnitModel
~~~~~|
~~~~~+--ProbeLevelModel
~~~~~|

```

~~~~~+--NmfPlm

### Directly known subclasses:

[NmfSnpPlm](#)

public abstract static class **NmfPlm**  
extends [ProbeLevelModel](#)

This class represents the NMF model of [REF].

### Usage

```
NmfPlm(..., maxIter=10L, maxIterRlm=20L, refs=NULL, flavor=c("v4", "v3", "v2", "v1"))
```

### Arguments

|            |                                                                                                                                                                                         |
|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ...        | Arguments passed to <a href="#">ProbeLevelModel</a> .                                                                                                                                   |
| maxIter    | The maximum number of iteration in the NMF step.                                                                                                                                        |
| maxIterRlm | A positive <a href="#">integer</a> specifying the maximum number of iterations used in rlm.                                                                                             |
| refs       | An index <a href="#">vector</a> ( <a href="#">integer</a> or <a href="#">logical</a> ) specifying the reference samples. If <a href="#">NULL</a> , all samples are used as a reference. |
| flavor     | (Internal/developmental only) A <a href="#">character</a> string specifying which algorithm to use.                                                                                     |

### Fields and Methods

#### Methods:

getAsteriskTags -

#### Methods inherited from [ProbeLevelModel](#):

calculateResidualSet, calculateWeights, fit, getAsteriskTags, getCalculateResidualsFunction, getChipEffectSet, getProbeAffinityFile, getResidualSet, getRootPath, getWeightsSet

#### Methods inherited from [MultiArrayUnitModel](#):

getListOfPriors, setListOfPriors, validate

#### Methods inherited from [UnitModel](#):
